## B.Sc.,Mathematics

## Programme Code - UMA (Aided\&SF)

## BachelorofScience(B.Sc.)

## Scientific Knowledge and Critical Thinking

Apply the knowledge of Life Science, Physical and Chemical Science, Mathematics, statistics, Computerscience and humanities for the attainment of solutionsto the problems that come across in our day-to-daylife/activities.

## Problem Solving

Identify and analyze the problem andformulate solutions for problems using the principles of mathematics,naturalscienceswithappropriateconsiderationforthepublichealth,safetyandenvironm entalconsiderations.,

## Communication and Computer Literacy

Communicatethefundamentalandadvancedconceptsoftheirdisciplineinwrittenandoralform.Ablet omakeappropriate andeffectiveuse ofinformationandinformation technologyrelevantto theirdiscipline

## Life-Long Learning

Recognize the need for and have the preparation and ability to engage in independent and lifelong learning inthebroadest context of technological change.

## Ethical, Social and Professional Understanding

Commitment to principles, codes of conduct and social responsibility in order to behave consistently
withpersonalrespect.Acquiretheresponsibilitytocontributeforthepersonaldevelopmentandforthe developmentofthe community.Respectthe ethical values, social responsibilities anddiversity.

## Innovative, Leadership and Entrepreneur Skill Development

Function as an individual, and asa member or leader in diverse teams and in multidisciplinary settings.Becomean entrepreneurbyacquiringtechnical, communicative, problemsolving, intellectualskills.

## Vission

To createn academically so undenvironmentthatnurtures,motivates and inspires excellence in research and teaching in Mathematics along with concernforsociety.

## Mission

- ToimpartqualityeducationinMathematicstoruralandeconomicalweakerstudents
- Toinspire, prepare and empower studentsto succeed in the ever-changingworld.
- To make the students creative and research oriented
- To educate and form the youth as liberated lifelong learners who are sensitive to gender andecology,empowered to respondtoglobal challenges.

## Programme Educational Objectives (PEO) for B.Sc.Mathematics

The objectives of this programme is

| PEO1 | Toprovidestudentswithathoroughknowledgeoffundamentalmathematicalfacts <br> andsolveproblemswhichcanbe analyzedmathematically. |
| :--- | :--- |
| PEO2 | Toprovidehigh qualityandrelevant educationinthefieldofMathematics |
| PEO3 | Toprovidegroundinginacoherentbodyofknowledge,abroadcoverageofrelated <br> academicskills,personal developmentandsocialskills. |
| PEO4 | TodevelopconfidencetoappearforSSC(CGL),IBPS,RRBandCivilservice <br> examinationsandwilloccupyhigher postsinadministrativelevel. |
| PEO5 | Toexposethemtovariouscontemporaryissueswhichwillenablethemtobecome <br> ethicalandresponsible towardsthemselves,co-workers, theSocietyand the <br> Nation |

Programme Specific Outcomes (PSO) for B.Sc.Mathematics
On the successful completion of B.Sc. Mathematics, the students will be able to

| PSO1 | Communicatemathematicseffectivelyusingvariousinstructionalstrategies. |
| :--- | :--- |
| PSO2 | Demonstrateacomputationalabilityinsolvingawidearrayofmathematical <br> problems. |
| PSO3 | Developmathematicalideasfrombasicaxiomsandanalyzevalidmathematical <br> reasoning. |
| PSO4 | Utilizemathematicalskillstosolvetheoreticalandappliedproblems. |
| PSO5 | Identifyapplicationsof mathematicsinvariousdisciplinesandsociety. |

## Preamble

The Course aims to develop an algebraic and geometric understanding of systems of linear equations and of linear transformations. It covers matrices, vector spaces, linear transformations, inner product spaces, Eigen values and Eigen vectors.

## Course Outcomes

On successful completion of the course, the student will be able to

| \# | Course Outcome | Expected <br> Proficiency <br> $(\%)$ | Expected <br> Attainment <br> $(\%)$ |
| :---: | :--- | :---: | :---: |
| $\mathbf{C O 1}$ | Determine whether a system of equations is consistent <br> and find its general solution | 80 | 70 |

## Contents

## Unit I

(18 Hours)
Definition and examples of vector spaces-Subspaces - Linear transformation-Span of a set. UnitII
(18 Hours)
Linear independence - Basis and dimension - Rank and Nullity - Matrix of a linear transformation.
Unit III
(18 Hours)
Definition and examples of inner product spaces - Orthogonality - Orthogonal Complement.
Unit IV
(20 Hours)
Algebra of Matrices - Types of Matrices - The Inverse of a Matrix - Elementary
Transformations - Rank of a Matrix - Simultaneous Linear Equations. Unit V
(16 Hours)
Characteristic Equation and Cayley-Hamilton theorem - Eigen values and Eigen Vectors -
Bilinear forms - Quadratic forms

## Preamble

The course aims to study the various properties of limit of a function in a set of real numbers and in a metric space. It provides a thorough discussion of the properties of open sets and closed sets. It classifies the various types of metric spaces. Also it explores the concepts of measure of a set and Riemann integrable functions.

## Course Outcomes

On the completion of the course the student will be able to

| \# | CourseOutcome | Expected Proficiency (\%) | $\begin{gathered} \text { Expected } \\ \text { Attainment } \\ (\%) \\ \hline \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| CO1 | Recall and analyze the fundamental properties of limit of a real function and limit of a function in a Metric space | 85 | 70 |
| CO 2 | Summarize and develop the properties of open sets and closed sets in a Metric space | 80 | 70 |
| CO3 | Identify and classify metric spaces as Connected, Complete and Compact. | 70 | 80 |
| CO4 | Construct and extend the properties of Riemann integral functions | 75 | 75 |
| CO5 | Recall and demonstrate measure of a set and Riemann integral | 80 | 75 |

## Contents

Unit -I
(18 hours)
Limits and metric spaces: Limit of a function on the real line - Metric spaces - Limits in metric spaces.

Unit -II
(18 hours)
Continuous functions on metric spaces: Functions continuous at a point on the real line Reformulation - Functions continuous on a metric space - Open sets - Closed sets Discontinuous functions on $R^{1}$.

## Unit -III

Connectedness, Completeness and Compactness: More about open sets - Connected sets Bounded sets and totally bounded sets - Complete metric spaces.

Unit - IV
(18 hours)
Connectedness, Completeness and Compactness: Compact metric spaces - Continuous functions on compact metric spaces - Continuity of the inverse function - Uniform continuity.

Unit - V
Calculus: Sets of measure zero - Definition of the Riemann Integral - Existence of the Riemann Integral - Properties of the Riemann Integral.

UnitI
Linear Programming Problem(LPP)- Mathematical formulation: Introduction -LinearProgrammingProblem-MathematicalformulationoftheproblemIllustrationonMathematicalformulationofLPPs.LinearProgramming ProblemGraphicalSolutionandExtension: Introduction - Graphical solution method - Some exceptional cases-General LinearProgramming Problem- Canonical and Standard forms of LPP-Insights into the simplexmethod.

## UnitII

(18 Hours)
Linear Programming Problem- Simplex method: Introduction- Fundamental propertiesof solutions- The computational Procedure- Use of Artificial variables- Degeneracy in LinearProgramming.

## UnitIII

(18 Hours)
Duality in Linear Programming: Introduction - General Primal - Dual pair Formulatinga dual Problem - Primal-Dual pair in matrix form - Duality theorems ComplementaryslacknessTheorem -Dualityand simplexmethod - Dual simplexmethod.

## UnitIV

(18 Hours)
Transportation Problem:Introduction - LP formulation of the Transportation Problem The Transportation table- Loops in Transportation tables-Solution of a Transportation ProblemFinding an initial basic feasible solution- Test for optimality - Degeneracy in

TransportationProblem-TransportationAlgorithm ( MODIMethod ).
UnitV
Assignment Problem: Introduction-Mathematical formulation of the problem Solutionmethods of the Assignment problem - Special cases in Assignment Problem-The TravellingSalesmanProblem

## Contents

Unit I
(15 Hours)
Constants, Variable and Data Types: Introduction -Character set- C Tokens - Keywords and identifiers - Constants - Variables - Data types - Declaration of variables - Declaration of storage class-Assigning values to variables-Defining symbolic constants -Declaring a variable as ConstantDeclaring a variable as volatile. Operators and Expressions: Introduction-Various types of operators Arithmetic expressions - Evaluation of expressions - Precedence of arithmetic operators - Some computational problems- Type conversions in Expressions-Operator precedence and associativity.

## Unit II

(15 Hours)
Managing Input and Output Operations: Introduction - Reading and writing a character Formatted input and output. Decision Making and Branching: Introduction- Decision Making with different types of if-statements - Switch statement -The?: operator-The goto statement.

Unit III
(15 Hours)
Decision Making and Looping: Introduction - While, do and for statements - Jumps in loops Concise Test expressions. Arrays: Introduction- One Dimensional Arrays(DeclarationandInitialization) - Two Dimensional and Multi- dimensional Arrays - Dynamic arrays- More aboutArrays.

## Unit IV

(15 Hours)
Character Arrays and Strings : Introduction - Declaring and initializing string variables Reading strings from terminal - Writing strings to screen - Arithmetic operations on characters Putting strings together - Comparison of two Strings - String handling functions - Table of strings -

Other features of strings. User defined functions: Introduction - Need for user Defined functions -A multi- function program - Elements of user defined functions - Definition of functions - Return values and their types - Function calls - Function declaration - Different categories of functions -Nesting of functions - Recursion - Passing arrays to functions - Passing strings to functions - The scope, visibility and life time of variables- Multifile Programs.

## Unit V

(15 Hours)
Structures and Unions : Introduction- Defining a structure - Declaring structure variables Accessing structure members - Structure initialization - Copying and comparing structure variables Operations on individual members - Arrays of structures - Arrays within structures - Structures within structures - Structures and functions - Unions -Size of structures - Bit fields.

## Contents

UnitI
(15Hours)
Definition - Resultant and components - Parallelogram of forces - Resultant of two forces Triangle of forces - Perpendicular triangle of forces - Converse of triangle of forces - Polygon of forces - Lami's theorem - Extended form of the parallelogram law of forces - Resolution of a force Components of a force along two given directions -Theorem on Resolved Parts - Resultant of any number of forces - Resultant of any number of coplanar forces - Condition of equilibrium of any number of forces acting upon a particle.
UnitII
(15Hours)
Friction:Introduction - Experimental results - Statistical, dynamical and limiting friction Laws of friction - Friction-a passive force - Coefficient of friction - Angle of friction - Cone of friction - Numerical values - Equilibrium of a particle on a rough inclined plane- Equilibrium of a body on a rough inclined plane under a force parallel to the plane - Equilibrium of a body on a rough inclined plane under any force- Problems on friction(simple problems only).

## UnitIII

(15Hours)
Projectiles: Definitions - Two fundamental principles - Path of a projectile is a parabola Characteristic of the motion of a projectile - Maximum horizontal range -Two possible directions to obtain a given range- Velocity at the end of time $t$ - Two possible directions to reach a given point Range on the inclined plane - Motion on the surface of smooth inclined plane.
UnitIV
Collision of elastic bodies: Introduction - Definition - Fundamental laws of impact - Impact of a smooth sphere on a fixed smooth plane - Direct impact of two smooth spheres - Loss of kinetic energy due to direct impact of two smooth spheres - Oblique impact of two smoothspheres - Loss of kinetic energy due to oblique impact of two smoothspheres.

## UnitV

Simple harmonic motion: Introduction - Simple harmonic motion in a straight line - General solution of simple harmonic motion equation - Geometrical representation of SHM - Change of origin - Composition of two simple harmonic motion of same period in the same straight line - Composition of two simple harmonic motion of same period in the two perpendicular directions - Simplependulum - Period of oscillation of a Simple pendulum - Equivalent Simple pendulum - The Seconds Pendulum.

## Contents

Unit I
Introduction: Security Goals - Cryptographic Attacks - Services and Mechanism - Techniques for Security Goals Implementation.
Mathematics of Cryptography: Integer Arithmetic - The Extended Euclidean Algorithm Modular Arithmetic - Matrices - Linear Congruence.

Unit II
(15 Hours)
Traditional Symmetric-Key Ciphers: Symmetric-Key Ciphers - Categories of Traditional Ciphers - Stream and Block Ciphers.

Unit III
(15 Hours)
Mathematics of Symmetric-Key Cryptography: Algebraic Structures - Group - Ring - Field $\mathrm{GF}\left(2^{\mathrm{n}}\right)$ Fields.

Unit IV
(15 Hours)
Mathematics of Asymmetric-Key Cryptography: Primes - Primality Testing - Factorization Chinese Remainder Theorem - Quadratic Congruence - Exponentiation and Logarithm.

## Unit V

(15 Hours)
Asymmetric-Key Cryptography: Difference between Symmetric-Key and Asymmetric-Key Cryptosystems - RSA Cryptosystem - Rabin Cryptosystem - Elgamal Cryptosystem - Elliptic Curve Cryptosystems.

## Contents

Unit - I
(18 Hours)
Analytic functions : Functions of a complex variable - Limits - Theorems on limit - Continuous functions - Differentiability - The Cauchy - Riemann equations -Analytic functions - Harmonic functions Conformal mapping.

Unit - II
(18 Hours)
Bilinear transformations: Elementary transformations - Bilinear transformations - Cross ratio - Fixed points of Bilinear transformations - Some special bilinear transformations - Mapping by elementary functions: The mappings $w=z^{2}, w=e^{z}, w=\sin z$ and $w=1 / 2(z+1 / z)$.

Unit - III
(18 Hours)
Complex integration: Definite integral - Cauchy's theorem- Cauchy's integral formula - Higher derivatives.

Unit - IV
(18 Hours)
Series expansions: Taylor's series- Laurent's series - Zeros of an analytic functions - Singularities.
Unit - V
(18 Hours)
Calculus of residues: Residues- Cauchy's residue theorem - Evaluation of definite integrals.

## Preamble

The course provides the basic concepts of data analysis and statistical computation. It outlines the techniques to expose the students to many statistical ideas and rules that underlie statistical reasoning. It explains step by step development of fundamental principles of statistics, probability concepts and random variables. It recognizes and interprets Binomial, Poisson and Normal distribution.

## Course Outcomes

On the completion of the course the student will be able to

| $\#$ | Course Outcome | Expected <br> Proficiency <br> $(\%)$ | Expected <br> Attainment <br> $(\%)$ |
| :--- | :--- | :---: | :---: |
| CO1 | Improve data handling skills and summarize statistical <br> computations. | 80 | 70 |
| CO2 | Determine the relationship between quantitative <br> variables and extend regression analysis. | 80 | 75 |
| $\mathbf{C O 3}$ | Recall and apply a comprehensive set of probabilistic <br> ideas in generating expectations. | 75 | 70 |
| $\mathbf{C O 4}$ | Find, interpret and analyze the measure of central <br> tendencies, m.g.f. and characteristic function of random <br> variables. | 80 | 70 |
| CO5 | Relate and demonstrate the knowledge of using various <br> distributions for statistical analysis. | 80 | 70 |

## Contents

Unit I
(15 Hours)
Solution of Algebraic and Transcendental Equations: Introduction - Bisection method Method of false position- Iteration method - Newton-Raphson Method - Some deductions from Newton-Raphson formula.
Unit II
(15 Hours)
Solution of Simultaneous Algebraic Equations: Solution of linear simultaneous equations

- Direct methods of solution: Gauss elimination method -Gauss-Jordan method - Iterative Methods of solution: Jacobi's iteration method - Gauss - Seidal iteration method.

## Unit III

(15 Hours)
Interpolation: Introduction - Newton's forward interpolation formula - Newton's backward interpolation formula - Interpolation with unequal intervals -Lagrange's interpolation formula - Divided differences - Newton's divided difference formula.
Unit IV
(15 Hours)
Numerical Differentiation and Integration: Numerical differentiation - Formulae for derivatives: Derivatives using Newton's forward difference formula - Derivatives using Newton's backward difference formula - Maxima and minima of a tabulated function - Numerical integration - Newton-Cotes quadrature formula: Trapezoidal rule - Simpson's $1 / 3$ rule - Simpson's $3 / 8$ rule. Unit V
(15 Hours)
Numerical Solution of ordinary differential equations: Introduction - Taylor's series method - Euler's method - Modified Euler's method - Runge-Kutta method - Predictor Corrector methods - Milne's method.

## Contents

## Unit I

(15 Hours)

## Introduction

What is an algorithm? - Algorithm specification - Performance analysis - Randomized algorithms.

## Unit II

(15 Hours)
Divide - and - Conquer
General method - Defective chessboard -Binary search - Finding the maximum and minimum - Merge sort - Quicksort - Selection - Strassen's Matrix multiplication.

## Unit III

(15 Hours)

## Greedy Method

The General method -Container loading- Knapsack problem - Tree vertex splitting - Job sequencing with deadlines - Minimum cost spanning trees.

## Unit IV

## Dynamic Programming

The General method - Multistage graphs - All pairs shortest paths - Single source shortest paths: General weights- String editing - 0/1 knapsack.

## Unit V

## Backtracking

The General method - The 8 - queens problem - Sum of subsets - Graph coloringHamiltonian cycles - Knapsack problem.

## Contents

## Unit I

(15 Hours)
Crisp Sets and Fuzzy Sets: Introduction - Crisp Sets: An Overview - The Notion of Fuzzy Sets - Basic Concepts of Fuzzy Sets - Classical Logic: An Overview - Fuzzy Logic.
Unit II
(15 Hours)
Operations on Fuzzy Sets: General Discussion - Fuzzy Complement - Fuzzy Union Fuzzy Intersection.

## Unit III

(15 Hours)
Fuzzy Relations: Crisp and Fuzzy Relations - Binary Relations - Binary Relations on a Single Set - Equivalence and Similarity Relations - Compatibility or Tolerance Relations Orderings.
Unit IV
(15 Hours)
Fuzzy Measures: General Discussion - Belief and Plausibility Measures - Probability Measures - Possibility and Necessity Measures - Relationship among Classes of Fuzzy Measures.

## Unit $V$

(15 Hours)
Applications: Engineering - Medicine - Management and Decision Making.

## List of Practicals

1. Fahrenheit to Celsius
2. Simple interest and Compound interest
3. Largest of three numbers
4. Odd/Even Number
5. Reverse the Number
6. Sum of Digits
7. Number of Multiples of 7 between 1 and 100
8. Prime Number
9. Quadratic Equation using switch case
10. Fibonacci Series
11. Average of $n$ values
12. nCr value
13. Multiplication table
14. Standard deviation
15. Median
16. Ascending order
17. Descending order
18. Sorting a list of Names
19. Matrix addition and subtraction
20. Matrix multiplication

## Contents

## List of Practical

1. Finding a root of the given equation using Bisection method.
2. Finding a root of a given equation using Newton Raphson method.
3. Solving the given system of equation by Gauss elimination method.
4. Finding $f(x)$ at given $x$ using Newton's interpolation formula.
5. Finding $f(x)$ at given $x$ using Lagrange's interpolation formula.
6. Evaluating $d y / d x$, at a given $x$ using Newton's differentiation formula.
7. Evaluating $\int f(x) d x$ using Trapezoidal rule.
8. Evaluating $\int f(x) d x$ using Simpson's $1 / 3$ rule.
9. Solving the given differential equation by Euler's method.

10 . Solving the given differential equation by Runge-Kutta method(4 $4^{\text {th }}$ Order only)

## Contents

## Unit I

Finite Automata: Finite State Machines and its Model - Deterministic Finite AutomataSimplified Notation - FA with and without Epsilon Transitions - Languages of Deterministic Finite Automata - Acceptability of a string by a DFA -Processing of Strings by DFA - Nondeterministic Finite Automata - Language of NFA - Equivalence between DFA and NFA - NFA with and without Epsilon Transitions

Unit II
(15 Hours)
Finite Automata: Two way Finite Automata - FA with output: Moore and Mealy machines - From finite automata to Moore machine - Interconversion between the machines - Equivalence between Moore and Mealy machines - Minimization of FA - Properties of Transition function -

Extending Transition function to strings - Applications of Finite automata - Limitations of finite state machines.

## Contents

## Unit I

(15 Hours)
ExactSamplingDistribution(Chi-SquareDistribution): Chi-squareVariate Applicationsof Chisquare Distribution - Chi-square Test as a Test for Population Variance - Chi-square Test ofGoodness of Fit - Student's 't' (Definition) - Fisher's 't' (Definition) - Applications of tdistribution -Test for Single Mean - t-Test for Difference of Means - t-Test for Testing Significance of an ObservedSample Correlation Coefficient - F-statistic (Definition) -Applications of F-distribution - F-test forEqualityof Population Variance.

## Unit II

Analysis of Variance:Introduction - One-way Classification - Mathematical Analysis of theModel- Two-wayClassification.

## Text Book:

Gupta.S.C. and Kapoor.V.K., 2019, Elements of Mathematical Statistics, Third Edition, Sultan Chand\&Sons, Educational Publishers, New Delhi.

| Unit | Chapter/Section |
| :---: | :---: |
| I | $13(13.1,13.5-13.5 .2)$, |
|  | $14(14.2,14.2 .2,14.2 .5-14.3 .2)$ |
| II | $17(17.1-17.3)$ |

VALUE ADDED COURSES

THIAGARAJAR COLLEGE, MADURAI - 9.
(An Autonomous Institution Affiliated to Madurai Kamaraj University) Re-Accredited with 'A ++' Grade by NAAC

POST GRADUATE AND RESEARCH DEPARTMENT OF MATHEMATICS
(For those who joined B.Sc. Mathematics on or after June 2020)

| Course Code | Course Title | Category | L | T | P | Credit |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Quantitative Aptitude - II | Value <br> Added <br> P-Practicals | - | - | - | - |

| Year | Semester | Int. Marks | Ext. Marks | Total |
| :---: | :---: | :---: | :---: | :---: |
| Second | Third \& Fourth | - | 100 | 100 |

The course provides various mathematical aptitude techniques for the aspirants of graduate level competitive examinations.

## Course Outcomes

On the completion of the course the student will be able to

| \# | Course Outcome | Expected <br> Proficiency <br> $(\boldsymbol{\%})$ | Expected <br> Attainment <br> $(\%)$ |
| :--- | :--- | :---: | :---: |
| CO1 | Formulate the problem quantitatively and recall <br> appropriate arithmetical methods to solve the <br> problem. | 90 | 80 |
| CO2 | Demonstrate various principles involved in <br> solving mathematical problems. | 85 | 80 |
| CO3 | Evaluate various real life situations by resorting <br> to analvsis of kev issues and factors | 90 | 85 |
| CO4 | Develop various mathematical skills to solve the <br> problems | 90 | 80 |
| CO5 | Improve and enhance arithmetic ability. | 85 | 80 |

Mapping of COs with PSO

|  | PSO1 | PSO2 | PSO3 | PSO4 | PSO5 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| CO1 | S | M | M | M | S |
| CO2 | M | S | M | S | M |
| CO3 | M | S | M | S | S |
| CO4 | M | S | S | S | M |
| CO5 | S | M | S | M | M |

Mapping of COs with POs

|  | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

| CO1 | S | S | M | M | M | S |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{C O 2}$ | M | S | M | M | M | S |
| $\mathbf{C O 3}$ | S | M | S | S | M | M |
| $\mathbf{C O 4}$ | M | S | M | M | S | S |
| $\mathbf{C O 5}$ | S | S | M | M | M | M |

## Unit I

(12 Hours)
Time and Work- Time and Distance- Heights and distances.
Unit II
(12 Hours)
Problems on trains- Alligation on mixture
Unit III
Simple Interest - Compound Interest
Unit IV
Area -Volume and Surface Area- Calendar
Unit $V$
(12 Hours)
Permutations and Combinations - Probability
